# BUYRITE SUPREME TEAT DIP

## Protect Your Herd with Confidence – The Science Behind Buyrite Supreme

When it comes to udder health, prevention is always better than cure. That's where Buyrite Supreme steps in – a premium teat disinfectant designed to offer maximum protection against mastitis causing bacteria while ensuring excellent teat condition, even in the harshest conditions.

### Buyrite Supreme combines two powerful disinfectants:

- Lactic Acid 2%– known for its broad spectrum antimicrobial properties, ideal for killing mastitis pathogens like Staph. aureus, E. coli, and Strep. Uberis
- Chlorhexidine Di-Gluconate 0.6% – a long-acting antiseptic that continues to protect teats after application and functions as a natural fly repellent

Together a robust dual defence before and after milking.

### Enhanced Teat Condition & Fly Repellence

What sets Buyrite Supreme apart is, Its high level of Eucalyptus Oil and 12% Glycerine, which:

- Softens and soothes teat skin
- Promotes healing of minor abrasions
- Natural fly repellent – crucial during summer months when fly populations and mastitis risk rise

Buyrite supreme is flexible to your system it can be used as a Dip or Spray

You can use Buyrite Supreme pre-milking to clean and disinfect

Apply post-milking to maintain teat health and seal the teat end

### Benefits at a glance

- Dual disinfectant system for superior protection
- Contains emollients and Eucalyptus Oil for soft teats
- Helps reduce SCC and mastitis incidence
- Convenient ready-to-use formulation – no mixing required
- **Scores highly on tegasc recommended teat dip list**

## PARLOUR PIT MATS

**Give Your knees and hips a break, invest in parlour pit mats**

- **Interlocking EVA Mat for maximum comfort while milking**
- **Non slip surface**
- **Non absorbent and easy to clean**
- **900 x 900 x 25mm**
- **Comes in Blue/Red**

**€19  
PER MAT**

# **SALMONELLA VACCINE**

Two strains of salmonella commonly affect cattle in Ireland, Salmonella dublin & Salmonella typhimurium.

These two strains are commonly associated with abortion and diarrhoea

## **Signs of Salmonella in your herd**

- Watery, foul-smelling diarrhoea, sometimes with blood or mucus
- Fever and depression
- Milk drop (sudden decline in milk production)
- Loss of appetite
- Abortion (in pregnant cows, especially with Salmonella Dublin)

**PROTECT YOUR STOCK AND VACCINATE AGAINST SALMONELLA**

**ORDER EARLY! STOCK IS LIMITED AND GOING FAST**

**10% OFF MILKRITE  
LINERS**

**LINERS TO SUIT MOST MILKING MACHINE'S**

**OFFER AVAILABLE UNTIL THE 31<sup>st</sup> AUGUST**

# PARSITE CONTROL

Effective parasite control combines grazing management, good nutrition, and targeted anthelmintic use.

## Anthelmintic Tips

**Target Treatments:** Use products effective against known parasites and life stages.

**Prevent Resistance:** Rotate active classes, weigh animals for accurate dosing and avoid blanket treatments

**Check Effectiveness:** Test dung samples after dosing.

**Observe Withdrawal Times:** Follow guidelines for milk and meat.

PER ROLL

# **AUTUMN RESEEDING TIPS**

## **A Farmer's Quick Guide to Grassland Reseeding**

Reseeding is one of the most effective ways to boost grass yield. Research shows newer swards can grow up to 3 tonnes more DM/ha and respond 25% better to nitrogen than older pasture.

### **Why Reseed?**

- Higher grass yields & quality
- Better nutrient uptake
- Improved animal performance
- More efficient grazing
- Option to add clover for nitrogen fixation

### **10 Steps to Reseeding Success**

- Pick underperforming paddocks – Weedy, low-output fields are top priority.
- Reseed at the right time – Spring or late summer work best.
- Soil test & correct – Aim for pH 6.2–6.5, P Index 3, K Index 3.
- Spray off old sward – Use glyphosate (e.g., Roundup Powermax, Mizr).
- Choose cultivation method – Plough, disc/one-pass, or direct drill.
- Make a fine, firm seedbed – Ensures good soil contact.
- Select the right seed mix – Buyrite has various grass seed options available
- Sow shallow ( $\leq 15\text{mm}$ ) – Too deep reduces establishment.
- Roll after sowing – Locks in moisture, promotes germination.
- First grazing at low cover – Use light stock and avoid poaching.

### **Don't Forget Clover**

- Fixes nitrogen naturally
- Increases protein
- Use clover-safe sprays like Clovermax during establishment

# GRASS SEED

## Weed Control

- Spray when weeds are present
- Pastor trio (non-clover safe) – effective on docks & a large range of common weeds
- Pro Clova– safe for mixed swards with White clover

## Choose Your Reseeding Method

- Ploughing – Best seedbed & yield
- Disc & One Pass – Quicker & effective
- Direct Drilling – Minimum disturbance; less reliable in poor soils

## Aftercare Tips

- Apply 30 units N/acre after 4–5 weeks
- Graze every 17–21 days to promote tillering
- Avoid silage in year one
- Watch for weeds, pests, and patchy growth
